Design Concept

Even though the competition topic seems very simple, it required doing quite a lot of research regarding what style suits this topic and what about the color theme design? After trying to answer these questions, I decided to elaborate my design idea by paying attention to what most contemporary bathroom design should be like and how to further refurbish this style into a much more elegant and modernize looking bathroom design.

Design: Floor Plan and Elevations

This floor plan indicates the bathroom function layout between three main areas (Shower area, Toilet area, and Basin area). The height used for most of the equipment in this room is very suitable for both the parents' and children's daily usage.

Design Visuals: Shower Area

I put the glass door to separate the shower area and the other space, so the user can enjoy the shower without letting any water spill to the other areas. Moreover, it has a big window to let good natural light come inside and make the environment more refreshing. The user also can use the winder blind if they want more privacy.

Design Visuals: Toilet Area

The toilet area contains the bidet, paper holder, and bidet sprayer. I put it next to the basin area to save space and make the bathroom more flexible for everyday used activities.

Design Visuals: Basin Area

There are three main elements in the basin area. The first is the cabinet on the top spot, which can put any everyday used item. The second key element is the wooden cabinet on the bottom part, which can be used for extra storing. Lastly, the it is the basin area that locate in the middle, its height is only around 750 mm, which allow both small children and adults to can use comfortably.

Design Visuals: Optional Images

This is one of the isomeric angle view. The bathroom has a big window design, so there would be enough natural light provide for the interior during the day.

Design Visuals: Optional Images

This is another isometric angle from the shower area. By looking from this angle we can understand that the bathroom interior is separated clearly between the shower area and the bidet area.

Specifications: Colors, Materials and Finishes

I want to use a dark color theme as the core of the interior layout for the design specification. These colors make the bathroom more civilized and look sophisticated. Moreover, the dark marble floor combined with the white marble wall evokes the feeling of luxury and elegance. Because the dark color can make the room feel smaller, I decided to use the white marble and white ceiling as the contrast to make the interior appear more extensive and comprehensive.

Main Materials

American Standard Products Specified

There are six products that I downloaded and used for this project. And all of them seem to fit in together very well, and they play an excellent role in creating a modernized-looking bathroom. However, I decided to use the bidet sprayer product from another source because I could not find any item related to that specific product on the website.

Thank you !
